EXPERIENCE

Contract Software Engineer (Thimble Consulting)

Mar 2025 – Jul 2025

Modern Treasury, San Francisco, US (Remote from London)

- Collaborated with a small team and stakeholders to design and implement a data-intensive accounting product under strict operational, technical, and regulatory constraints.
- Enabled users to create, view, manage, download, and export journals with complex transaction selection, automated generation, grouping, and validation logic; built interactive tables, configurable settings, and user-facing notifications to ensure a responsive, intuitive experience.

Tools: Ruby, TypeScript, React, PostgreSQL, ParadeDB, GraphQL

Contract Software Engineer (Thimble Consulting)

Jun 2020 – Feb 2022

Glossier, New York, US (Remote from London)

- Designed and built a robust and scalable order data pipeline, creating an immutable audit trail of reliable operational and financial data. The data stream introduced a decoupled data schema, laying the ground work for a future eCommerce system, and enabled a diverse range of consumers for any team to build product applications, perform analysis, and execute critical reporting.
- Researched and built innovative prototypes, such as an event sourcing solution for the order data stream and time travel of historical order data to aid recovery and analysis.
- Significantly reduced financial and tax gaps which affected the accounting month end's process and the company's revenue. Collaborated with the customer support and accounting teams to fix issues in the data collection and standard operating procedures. Effectively reducing the number of support tickets and improving the customer experience.
- Increased org-wide engineering efficiency by improving monitoring of systems and implementing a new deployment process for the monolith app's staging environment, resulting in a non-blocking process for teams and individuals.

Tools: Ruby, TypeScript, PostgreSQL, Fivetran, Snowflake, Solidus, AWS, Docker, DataDog

Senior Software Engineer

Apr 2018 – Apr 2020

REKKI, London, UK

- Joined in Series A to scale and stabilize the platform amid rapid growth; introduced engineering rituals (standups, ticketing, monitoring), throttled alerts for efficient firefighting, and built foundational tools like chat bots, growth automation, and API throttling to boost operational resilience
- Led backend and infrastructure teams through Series B as tech lead, reporting to Founder CTO; defined roadmaps, KPIs, SLAs, and on-call practices; managed AWS/K8s infrastructure for zero-downtime deploys, auto-rollbacks, and incident response; drove recruitment, onboarding, and a data-driven mindshift to minimize risks
- Pioneered data engineering by architecting the initial ETL pipeline, Redshift warehouse, and SageMaker-based delivery platform; enabled reproducible model serving via Docker, APIs, and version control, reducing prod DB load with read replicas and empowering analytics-driven decisions
- Eliminated architectural and data debt through migrations: CouchDB to PostgreSQL for joinable data, Elixir/RabbitMQ to streamlined Go for order flows, and OVH to AWS for improved performance and reduced latency; introduced core concepts of buyer, branch, and supplier into the codebase
- Delivered critical backend capabilities across product, growth, and operations: real-time Web-Socket/HTTP APIs, supplier HTTP/FTP integrations, invoice uploading, automated GDPR handling, spam detection, SMS/email optimization, targeted push notifications, and a localisation pipeline to enable rapid international expansion

Tools: Elixir, Ruby, Python, Go, JS, RabbitMQ, PostgreSQL, AWS, Docker, K8s, Grafana

Senior Software Engineer

Mar 2017 – Apr 2018

[Findmypast](#), London, UK

- Built new onboarding flow for family tree product which led to a 133% increase of family tree size for new users. More effective flywheel resulted in higher conversion rate and revenue.
- Launched a new product for searching records on geographical maps. Very positive user feedback.
- Actively involved in hiring, guilds, and developer relations (events, blog, open source, etc.)

Tools: JavaScript, React, GraphQL, Elixir, Phoenix, TeamCity, Trello, LaunchDarkly

Software Engineer

Feb 2015 – Oct 2016

[Funding Circle](#), London, UK

- Increased borrower conversions by programmatically prioritising leads for Sales team
- Increased engineering efficiency by building internal tooling to improve continuous delivery pipeline, such as dockerising stack, stabilising test suite, and monitoring of software releases
- Built tools to strengthen business operations and comply with financial conduct regulations. Such as the open source [Shipment Tracker](#) to capture audit trails and improve visibility of releasing software, and a data warehouse for daily reconciliation and reporting tasks.

Tools: Ruby, Rails, PostgreSQL, GitHub, Capistrano, Jenkins, Docker, JIRA, AWS, RabbitMQ

Consulting Software Engineer

Sep 2014 – Feb 2015

[Landlord Web Solutions](#), Ontario, Canada (Remote from London)

- Lead developer on a project for analytics and metrics in the apartment rental industry

Tools: Ruby, Rails, RSpec, PostgreSQL, Git, GitHub, Heroku, Mailgun, Python

Software Developer

Jan 2014 – Jun 2014

[Landlord Web Solutions](#), Ontario, Canada

Systems Analyst (Co-op)

May 2010 – Dec 2010

[Ministry of Transportation of Ontario](#), Ontario, Canada

Data Specialist (Co-op)

Jan 2009 – Apr 2009

[GenieKnows Inc.](#), Nova Scotia, Canada

EDUCATION

B.Sc. Computer Science (Honours & Co-op)

Sep 2007 - Oct 2013

[Brock University](#), Ontario, Canada

- Concentration in Intelligent Systems (Artificial Intelligence)
- Deans' Honours List
- Tutored introductory Computer Science, Math, and Applied Computing courses, 2011-2013
- Representative at Ontario Universities' Fair, Fall Preview Day, and CSEdWeek, 2009, 2012
- Guest speaker at Co-op Student Panel Workshop, 2010-2012

WRITING

2018 [REKKI: Version management with Homebrew and asdf](#)

2018 [Findmypast: Co-author Commits with Git Mob](#)

2016 [Funding Circle: Shipping in FinTech](#)
